

# Aviation Investigation Final Report

<b>Location:</b>	Sanford, Florida	<b>Accident Number:</b>	ERA24LA287
<b>Date &amp; Time:</b>	June 27, 2024, 15:34 Local	<b>Registration:</b>	N174SC
<b>Aircraft:</b>	Airbus Helicopters AS350	<b>Aircraft Damage:</b>	Substantial
<b>Defining Event:</b>	Settling with power/vortex ring state	<b>Injuries:</b>	3 None
<b>Flight Conducted Under:</b>	Public aircraft		

## Analysis

As part of a law enforcement simulation exercise, the helicopter pilot was orbiting near the departure airport between 200 to 300 ft above ground level, at 20 to 40 knots indicated airspeed. The pilot described that while the helicopter was in a left orbit the airspeed decreased to near 0. At that time, the helicopter began to descend in a vortex ring state (VRS). Due to the low altitude, the pilot was not able to recover from VRS and entered an autorotation to a grass area on the airport. The helicopter subsequently landed hard and came to rest upright in the grass area resulting in substantial damage to the helicopter's tail boom. The pilot reported that there were no preimpact mechanical malfunctions or failures of the helicopter.

## Probable Cause and Findings

The National Transportation Safety Board determines the probable cause(s) of this accident to be:

The helicopter pilot's improper maneuvering at low altitude in gusty wind conditions, which resulted in the helicopter entering a vortex ring state, and hard landing during a subsequent autorotation.

## Findings

<b>Personnel issues</b>	Incorrect action performance - Pilot
<b>Environmental issues</b>	Gusts - Response/compensation

## Factual Information

### History of Flight

<b>Maneuvering-low-alt flying</b>	Settling with power/vortex ring state (Defining event)
<b>Autorotation</b>	Hard landing

The National Transportation Safety Board (NTSB) is an independent federal agency charged by Congress with investigating every civil aviation accident in the United States and significant events in other modes of transportation—railroad, transit, highway, marine, pipeline, and commercial space. We determine the probable causes of the accidents and events we investigate, and issue safety recommendations aimed at preventing future occurrences. In addition, we conduct transportation safety research studies and offer information and other assistance to family members and survivors for each accident or event we investigate. We also serve as the appellate authority for enforcement actions involving aviation and mariner certificates issued by the Federal Aviation Administration (FAA) and US Coast Guard, and we adjudicate appeals of civil penalty actions taken by the FAA.

The NTSB does not assign fault or blame for an accident or incident; rather, as specified by NTSB regulation, “accident/incident investigations are fact-finding proceedings with no formal issues and no adverse parties ... and are not conducted for the purpose of determining the rights or liabilities of any person” (Title 49 *Code of Federal Regulations* section 831.4). Assignment of fault or legal liability is not relevant to the NTSB’s statutory mission to improve transportation safety by investigating accidents and incidents and issuing safety recommendations. In addition, statutory language prohibits the admission into evidence or use of any part of an NTSB report related to an accident in a civil action for damages resulting from a matter mentioned in the report (Title 49 *United States Code* section 1154(b)). A factual report that may be admissible under 49 *United States Code* section 1154(b) is available [here](#).
