

Aviation Investigation Final Report

Location: Rosenberg, Texas Accident Number: CEN23LA345

Date & Time: August 2, 2023, 15:59 Local Registration: N38483

Aircraft: Piper PA-28-181 Aircraft Damage: Substantial

Defining Event: Fuel exhaustion **Injuries:** 1 None

Flight Conducted Under: Part 91: General aviation - Instructional

Analysis

The student pilot stated that in preparation for his solo cross-country flight, he reviewed his flight planning with his flight instructor. He said he flew to the destination airport, where he performed one approach and landing, followed by flight maneuvers north of the airport, and then landed. The pilot shut the airplane down to use the restroom. Prior to departure from the destination airport, he did not visually check the airplane fuel level through the fuel filler ports. During the return flight, he visually observed the fuel quantity, and it was "dropping rapidly," and he decided to land at an alternate airport. During the approach to the alternate airport, the engine "sputtered" and quit. He landed the airplane with a tailwind and "slammed on the brakes" to try to slow the airplane down as soon as possible. The airplane overran the runway and impacted a fence and construction equipment that resulted in substantial damage to both wings. Postaccident examination of the airplane revealed no useable fuel in the airplane fuel tanks.

Probable Cause and Findings

The National Transportation Safety Board determines the probable cause(s) of this accident to be:

The student pilot's improper fuel management that resulted in fuel exhaustion, a total loss of engine power, and a subsequent forced landing and landing overrun at an alternate airport.

Findings

Aircraft Fuel - Fluid management

Aircraft Fuel - Fluid level

Personnel issues Decision making/judgment - Pilot

Factual Information

History of Flight

Enroute	Fuel exhaustion (Defining event)	
Enroute	Loss of engine power (total)	
Landing-landing roll	Runway excursion	
Landing-landing roll	Collision with terr/obj (non-CFIT)	

Pilot Information

Certificate:	Commercial; Student	Age:	34,Male
Airplane Rating(s):	None	Seat Occupied:	Left
Other Aircraft Rating(s):	Helicopter	Restraint Used:	Unknown
Instrument Rating(s):	Helicopter	Second Pilot Present:	No
Instructor Rating(s):	None	Toxicology Performed:	
Medical Certification:	Unknown	Last FAA Medical Exam:	
Occupational Pilot:	No	Last Flight Review or Equivalent:	
Flight Time:	55.7 hours (Total, all aircraft), 10.8 hours (Total, this make and model)		

Aircraft and Owner/Operator Information

Aircraft Make:	Piper	Registration:	N38483
Model/Series:	PA-28-181	Aircraft Category:	Airplane
Year of Manufacture:	1977	Amateur Built:	
Airworthiness Certificate:	Utility	Serial Number:	28-7790556
Landing Gear Type:	Tricycle	Seats:	4
Date/Type of Last Inspection:	July 14, 2023 100 hour	Certified Max Gross Wt.:	2550 lbs
Time Since Last Inspection:	12546.5 Hrs	Engines:	1 Reciprocating
Airframe Total Time:	as of last inspection	Engine Manufacturer:	Lycoming
ELT:	Installed, not activated	Engine Model/Series:	0-360-A4M
Registered Owner:	KDRD HOLDINGS LLC	Rated Power:	
Operator:	On file	Operating Certificate(s) Held:	None

Administrative Information

Investigator In Charge (IIC):	Gallo, Mitchell	
Additional Participating Persons:	Rick Bolton; Federal Aviation Administration; Houston, TX	
Original Publish Date:	November 30, 2023	
Last Revision Date:		
Investigation Class:	Class 4	
Note:	The NTSB did not travel to the scene of this accident.	
Investigation Docket:	https://data.ntsb.gov/Docket?ProjectID=192784	

The National Transportation Safety Board (NTSB) is an independent federal agency charged by Congress with investigating every civil aviation accident in the United States and significant events in other modes of transportation—railroad, transit, highway, marine, pipeline, and commercial space. We determine the probable causes of the accidents and events we investigate, and issue safety recommendations aimed at preventing future occurrences. In addition, we conduct transportation safety research studies and offer information and other assistance to family members and survivors for each accident or event we investigate. We also serve as the appellate authority for enforcement actions involving aviation and mariner certificates issued by the Federal Aviation Administration (FAA) and US Coast Guard, and we adjudicate appeals of civil penalty actions taken by the FAA.

The NTSB does not assign fault or blame for an accident or incident; rather, as specified by NTSB regulation, "accident/incident investigations are fact-finding proceedings with no formal issues and no adverse parties ... and are not conducted for the purpose of determining the rights or liabilities of any person" (Title 49 Code of Federal Regulations section 831.4). Assignment of fault or legal liability is not relevant to the NTSB's statutory mission to improve transportation safety by investigating accidents and incidents and issuing safety recommendations. In addition, statutory language prohibits the admission into evidence or use of any part of an NTSB report related to an accident in a civil action for damages resulting from a matter mentioned in the report (Title 49 United States Code section 1154(b)). A factual report that may be admissible under 49 United States Code section 1154(b) is available here.
