

Aviation Investigation Final Report

Location: Santa Barbara, California Accident Number: WPR23LA176

Date & Time: May 2, 2023, 11:33 Local Registration: C-GXGS

Aircraft: AkroTech Aviation Giles G-202 Aircraft Damage: Substantial

Defining Event: Fire/smoke (non-impact) **Injuries:** 1 None

Flight Conducted Under: Part 91: General aviation - Personal

Analysis

The pilot of the experimental airplane reported that after a normal landing, during rollout the local air traffic controller advised him that they saw flames or smoke under the fuselage. After coming to a stop, the pilot egressed and dispensed a handheld fire extinguisher, successfully extinguishing a fire that had developed in the area of the front seat. The pilot stated he then saw liquid venting from the main tank vent that was igniting on the ground. Because his fire extinguisher was emptied, he pushed the airplane away from the fire, and by the time emergency response personnel arrived it had extinguished itself. The fuselage sustained substantial damage from the fire.

According to the pilot, the fuel system consisted of two wing tanks and a main center tank in the fuselage. When a wing tank is selected for fuel delivery a distributor delivers fuel under constant pressure to the engine and returns excess to the main tank. The pilot stated that he typically switches fuel tanks during flight to manage the level in the main tank, and that landings, and takeoffs are typically performed with the main tank selected and partially full. However, for the accident flight, weather conditions caused an unplanned diversion, and he had to land the airplane with a full main tank.

Due to the fuel configuration at the time of the landing, the main tank fuel quantity level was above the vent inlet line and combined with the landing flare attitude, the fuel began to vent. The vent line was located near the engine exhaust stack, and it is likely that high temperature exhaust gasses ignited misted or vaporized fuel as it exited the vent line.

The pilot reported that there were no preaccident mechanical malfunctions or failures with the airplane that would have precluded normal operation, and the accident could have been avoided if the fuel vent was extended to vent into the relative wind at all speeds.

Probable Cause and Findings

The National Transportation Safety Board determines the probable cause(s) of this accident to be:

A fire that resulted from venting fuel coming into contact with hot exhaust surfaces or exhaust gases. Contributing to the fire was the design and location of the main tank fuel vent.

Findings

Aircraft	(general) - Design
Aircraft	Fuel - Fluid level

Factual Information

History of Flight

Landing-landing roll Fire/smoke (non-impact) (Defining event)

Pilot Information

Certificate:	Airline transport	Age:	37,Male
Airplane Rating(s):	Single-engine land; Single-engine sea; Multi-engine land; Multi- engine sea	Seat Occupied:	Rear
Other Aircraft Rating(s):	Glider	Restraint Used:	5-point
Instrument Rating(s):	Airplane	Second Pilot Present:	No
Instructor Rating(s):	None	Toxicology Performed:	
Medical Certification:	Class 1 Without waivers/limitations	Last FAA Medical Exam:	November 9, 2022
Occupational Pilot:	Yes	Last Flight Review or Equivalent:	November 9, 2022
Flight Time:	7342 hours (Total, all aircraft), 279 hours (Total, this make and model), 2118 hours (Pilot In Command, all aircraft), 145 hours (Last 90 days, all aircraft), 60 hours (Last 30 days, all aircraft), 1 hours (Last 24 hours, all aircraft)		

Aircraft and Owner/Operator Information

Aircraft Make:	AkroTech Aviation	Registration:	C-GXGS
Model/Series:	Giles G-202	Aircraft Category:	Airplane
Year of Manufacture:	2003	Amateur Built:	Yes
Airworthiness Certificate:	Experimental (Special)	Serial Number:	61
Landing Gear Type:	Tricycle	Seats:	2
Date/Type of Last Inspection:	May 10, 2022 Annual	Certified Max Gross Wt.:	1850 lbs
Time Since Last Inspection:	81 Hrs	Engines:	1 Reciprocating
Airframe Total Time:	1091 Hrs at time of accident	Engine Manufacturer:	Aerosport Power
ELT:	C91A installed, not activated	Engine Model/Series:	IO-360-EXP
Registered Owner:	MKT Aerobatics LTD	Rated Power:	200 Horsepower
Operator:	MKT Aerobatics LTD	Operating Certificate(s) Held:	None

Administrative Information

Investigator In Charge (IIC):	Blum, Contessa
Additional Participating Persons:	Juan Herrera; Van Nuys FSDO; Van Nuys, CA
Original Publish Date:	September 8, 2023
Last Revision Date:	
Investigation Class:	Class 4
Note:	The NTSB did not travel to the scene of this accident.
Investigation Docket:	https://data.ntsb.gov/Docket?ProjectID=107309

The National Transportation Safety Board (NTSB) is an independent federal agency charged by Congress with investigating every civil aviation accident in the United States and significant events in other modes of transportation—railroad, transit, highway, marine, pipeline, and commercial space. We determine the probable causes of the accidents and events we investigate, and issue safety recommendations aimed at preventing future occurrences. In addition, we conduct transportation safety research studies and offer information and other assistance to family members and survivors for each accident or event we investigate. We also serve as the appellate authority for enforcement actions involving aviation and mariner certificates issued by the Federal Aviation Administration (FAA) and US Coast Guard, and we adjudicate appeals of civil penalty actions taken by the FAA.

The NTSB does not assign fault or blame for an accident or incident; rather, as specified by NTSB regulation, "accident/incident investigations are fact-finding proceedings with no formal issues and no adverse parties ... and are not conducted for the purpose of determining the rights or liabilities of any person" (Title 49 Code of Federal Regulations section 831.4). Assignment of fault or legal liability is not relevant to the NTSB's statutory mission to improve transportation safety by investigating accidents and incidents and issuing safety recommendations. In addition, statutory language prohibits the admission into evidence or use of any part of an NTSB report related to an accident in a civil action for damages resulting from a matter mentioned in the report (Title 49 United States Code section 1154(b)). A factual report that may be admissible under 49 United States Code section 1154(b) is available here.
